

**NITROGEN**

**N**

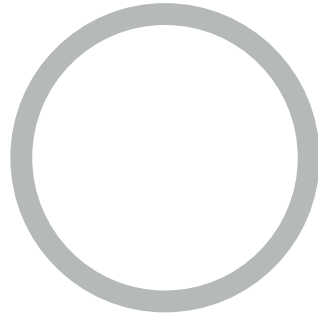

7

## AIR

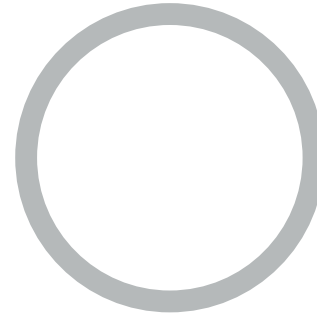

Nitrogen is the most abundant gas in the atmosphere, making up 78% of the air we breathe.

## AURORA

Nitrogen is a key component of the aurora borealis, which is caused by the interaction of solar wind particles with the Earth's magnetic field.

## FERTILISER

Nitrogen is a vital nutrient for plants, and is often used in fertilisers to help them grow. It is also a key component of many industrial processes.
